ClearMind Assurance

AI assurance and model risk specialists | Mumbai, London, Singapore

Response to: Meridian Financial Services (MFS) — MFS-RFP-2026-031: Enterprise AI Governance and Model Risk Platform
Submission date: 2026-10-15

1. Executive Summary

ClearMind Assurance proposes ClearMind Govern, an AI governance platform used by regulated banks and insurers to inventory, approve, monitor and evidence every AI system in production. Our approach treats governance as a control framework first and software second.

We understand MFS currently runs 140 machine-learning models and 12 generative AI use cases, and needs a single register, a consistent risk tiering method, and audit-ready evidence for the RBI, the DPDP Act and the EU AI Act for its European subsidiary.

2. Governance and Policy Framework

- Central AI inventory covering ML models, vendor AI and generative AI use cases, with owners and lineage.
- Pre-built policy library mapped to NIST AI RMF, ISO/IEC 42001 and the EU AI Act, with 180 configurable controls.
- Risk tiering questionnaire with automatic routing to model risk, legal, privacy and the AI ethics committee.
- Approval workflows with maker-checker sign-off and time-bound exceptions.

ClearMind is itself certified to ISO/IEC 42001:2023 (AI management system) and ISO/IEC 27001:2022.

3. Model Risk and Monitoring

Monitoring covers data drift, prediction drift, performance decay against ground truth, and fairness metrics across protected attributes. Generative AI use cases are evaluated for hallucination rate, toxicity and prompt-injection resilience using scheduled test suites.

Alerts route to model owners with severity levels and are linked to incident records, so every breach has a documented response.

4. Regulatory Compliance and Audit

- EU AI Act conformity templates, including technical documentation for high-risk systems.
- One-click evidence packs for internal audit and regulators, with immutable, time-stamped audit trails.
- DPDP Act data protection impact assessment templates linked to each use case.

5. Integration, Deployment and Timeline

Connectors are available for Databricks, Azure Machine Learning, SageMaker and MLflow. The platform is deployed as single-tenant SaaS in Azure Central India. Implementation takes 18 weeks, including policy configuration and migration of the existing model inventory spreadsheet.

6. Commercial Proposal and Support

Item	Basis	Amount (INR, excl. GST)
Implementation and policy configuration	Fixed price	1,40,00,000
Platform subscription (up to 250 models)	Per year x 3	3,30,00,000
Premium support and assurance reviews	Per year x 3	45,00,000
Total three-year cost		5,15,00,000

Support is 24x7 for severity 1 incidents with a 1-hour response. References: two private-sector banks and one general insurer in India, contact details provided on request.
